

We can make text **bold**, or *italic*, or `monospaced`, or underlined. Sometimes we need to use letters with grave accents, acute accents, circumflexes, umlauts, long umlauts, tildes, cedillas, macrons, underbars, overdots, underdots, rings, breves, haccets, and ties. Dollar signs have to be escaped like \$. Backslashes are typed like \, and tildes as ~.

Take note that quotation marks are “backticks and apostrophes”. Using ordinary ”quotation marks” looks odd.
